

Trevor Nance

Trevornance7@gmail.com | github.com/nancetrevor | trevornance.dev

Core Skills & Highlights

- Design backend systems using Go, Python, SQL, and AWS services with a focus on scalability, reliability, and maintainability
 - Apply AWS cloud architecture concepts across compute, networking, storage, databases, security, monitoring, and cost optimization
 - Build cloud-ready application architectures using EC2, S3, RDS, VPC, IAM, Route 53, CloudFront, Lambda, and load balancing
 - Develop ETL pipelines that ingest, transform, and structure operational data for forecasting, analytics, and decision support
 - Build AI-driven workflows using Amazon Bedrock and Amazon OpenSearch Service for semantic search, vector search, RAG, and context-aware insights
 - Translate real-world business processes into automated systems for forecasting, inventory optimization, procurement, and operational efficiency
-

Certifications

AWS Certified Solutions Architect Associate

Amazon Web Services – Issued May 2026

Verification:

https://www.credly.com/badges/5d413ae7-9b02-4c27-9362-263b502fd2db/public_url

Technical Skills

Languages: Go, Python, SQL, JavaScript

Backend: REST APIs, Flask, API design, system integration

Databases & Data: PostgreSQL, MySQL, relational modeling, ETL pipelines, forecasting workflows

AWS & Cloud: EC2, S3, RDS, VPC, IAM, Route 53, CloudFront, Lambda, Elastic Load Balancing, Bedrock, OpenSearch

Tools: Docker, Linux, Git/GitHub, VPS hosting, Terraform

Professional Experience

Last Frontier Hospitality

Operations Manager (2023 - 2024) Software Developer (2024 – 2026)

- Built and deployed a custom ODOO based ERP system, centralizing store operations across inventory, purchasing, and production
 - Designed and implemented automated procurement workflows, translating forecast data into purchasing decisions
 - Created ingredient-level inventory tracking, improving visibility into consumption patterns and reducing waste by up to 30%
 - Transformed manual processes into data-driven systems, improving operational efficiency and decision-making speed by hours a day
 - Developed forecasting workflows to predict daily sales and production demand, improving planning accuracy and reducing overproduction.
 - Built AI-assisted search and analysis workflows using Amazon Bedrock and Amazon OpenSearch Service to support semantic search, retrieval, and operational insights.
-

Health Care Hospitality Group

Dietary Manager (2017 – 2020)

- Managed food service operations, including staffing, procurement, and regulatory compliance
 - Implemented inventory control systems and cost reduction strategies, improving purchasing efficiency
 - Optimized vendor coordination and ordering processes, reducing waste and improving consistency
-

Projects

MMA Data Platform (fightdb.org)

- Designed and implemented a relational PostgreSQL database modeling fighters, events, and fight statistics
 - Built a RESTful API in Go using net/http to serve structured data to front-end applications
 - Developed data ingestion pipelines (Python + BeautifulSoup) to collect and normalize external data sources
 - Containerized the system with Docker for consistent development and deployment environments
 - Built front-end visualizations using JavaScript, HTML, and CSS
-

CLI Snippet Manager (Go + BubbleTea)

- Built a terminal-based tool for managing reusable command snippets

CLI Journal Tool (Go)

- Developed a file-based journaling system with search and retrieval capabilities
-

Education & Technical Training

Johnson & Wales University

- Bachelor of Science in Nutrition — 2016

Boot.dev

- Backend Developer Program
 - Focused on Go, Python, SQL, HTTP servers, APIs, Git, Linux, data structures, algorithms, and backend development fundamentals.
-

Additional Experience

Ecotile

Warehouse Worker (2021 - 2023)

- Supported warehouse operations, inventory handling, order fulfillment, and process efficiency in a fast-paced environment.
